

## SMARTVote

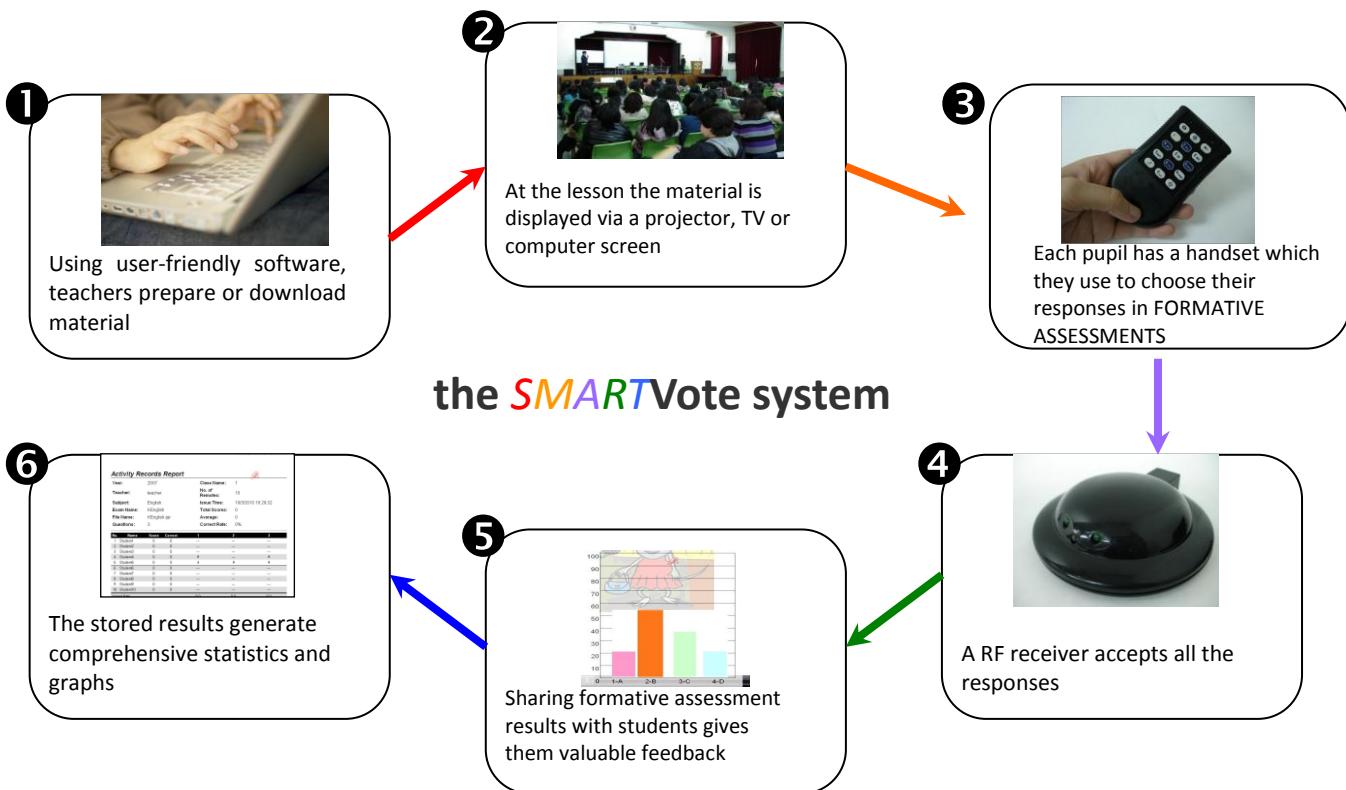

All teachers know that simply lecturing their students does not work. Much more is learnt, created, discovered and retained when the students participate and interact. To inspire and motivate, there must be ongoing two-way communication between teacher and students.

**SMARTVote** is a leading interactive response system which not only enhances this process but is the core element which creates interaction in the first place. Using modern sophisticated software running on a standard PC, the **SMARTVote** system enables students to respond and interact to the teacher's questions and other material using their own personal handsets, increasing the learning and evaluation experience. Results and reports can be displayed instantly and are automatically stored for subsequent analysis.

Unlike traditional response systems using infra-red technology which makes the response process rather difficult, **SMARTVote** uses radio frequency technology to significantly improve the response process and cover an amazing 50 sq meter range!

Teachers can use **SMARTVote** in the classroom for ALL subjects:

## Why SMARTVote ?

### **Teaching & Learning**

- ★ Interaction
- ★ Involvement
- ★ Raise Interests
- ★ Motivation
- ★ Debate
- ★ Learning retention
- ★ Your own material and question files

### **Teaching Aids Creations**

- ★ Simple question and answer sessions
- ★ Tests
- ★ Assessments and evaluations
- ★ Presentations
- ★ Opinion and attitude analysis
- ★ Surveys
- ★ Voting
- ★ Promoting debate
- ★ Quizzes and games

### **Activities / Formative Assessments**

- ★ Standard (questions and response)
- ★ Fastest Response (fastest fingers first)
